Chapter 1

Prerequisites

1.1 Theory

Before you start you should be familiar with:

- Coffee
- Etc
- Etc

1.2 Software

We will primarily be writing R code using the RStudio GUI.

Chapter 2

Introduction to Survival Analysis

You can label chapter and section titles using `{#label}` after them, e.g., we can reference Chapter **??**. If you do not manually label them, there will be automatic labels anyway, e.g., Chapter **??**.

Figures and tables with captions will be placed in `figure` and `table` environments, respectively.

```r
par(mar = c(4, 4, .1, .1))
plot(pressure, type = 'b', pch = 19)
```

Reference a figure by its code chunk label with the `fig:` prefix, e.g., see Figure 2.1. Similarly, you can reference tables generated from `knitr::kable()`, e.g., see Table 2.1.

```r
knitr::kable(
  head(iris, 20), caption = 'Here is a nice table!',
  booktabs = TRUE
)
```

You can write citations, too. For example, we are using the **bookdown** package (Xie, 2020) in this sample book, which was built on top of R Markdown and **knitr** (Xie, 2015).

5.7	3.8	1.7	0.3	setosa
5.1	3.8	1.5	0.3	setosa

Chapter 3

Some Non-Parametric Procedures

Here is a review of existing methods.

Chapter 4

The Cox Regression Model

We describe our methods in this chapter.

Chapter 5

Model Checking in the Cox Regression Model

Some *significant* applications are demonstrated in this chapter.

5.1 Example one

5.2 Example two

Chapter 6

Parametric Proportional Hazards Models

We have finished a nice book.

Chapter 7

Time-Dependent Variables and Covariates
